

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method in a data processing system for managing access to a set of applications associated with a universal resource locator, the method comprising:  
receiving a request for a first application from a second application, wherein the request includes the universal resource locator and a user identification and, wherein every request for applications within the set of applications uses the universal resource locator;  
modifying the universal resource locator based on the user identification, wherein the step of modifying maintains the universal resource locator unchanged as shown in the second application; and  
directing the request to a selected application within the set of applications using the modified universal resource locator.
2. (Original) The method of claim 1, wherein the user identification is an Internet Protocol address of a node originating the request.
3. (Original) The method of claim 1, wherein the user identification is a user name located within the request.
4. (Original) The method of claim 1, further comprising:  
replacing the selected application with a new selected application.
5. (Canceled)
6. (Original) The method of claim 1, wherein each application within the set of applications is assigned to a different universal resource locator and wherein the directing step comprises:  
identifying the set of applications using the universal resource locator;  
identifying the selected application based on the user identification; and  
sending the request to the selected application using an assigned universal resource locator assigned to the selected applications.

7. (Currently Amended) A method in a data processing system for managing access to a plurality of applications, the method comprising:

associating the plurality of applications with a first universal resource locator;

assigning the plurality of applications with plurality of universal resource locators excluding the first universal resource locator;

receiving a request for a first application from a second application, wherein the request includes the first universal resource locator and an identification of a user and, wherein every request for applications within the plurality of applications uses the first universal resource locator;

modifying the first universal resource locator based on the user identification, wherein the step of modifying maintains the first universal resource locator unchanged as shown in the second application; and

redirecting the request using the modified universal resource locator to a particular application within the plurality of applications.

8. (Original) The method of claim 7, wherein the identification is an Internet Protocol address.

9. (Original) The method of claim 7, wherein the identification is a user name.

10. (Currently Amended) A data processing system comprising:

a bus system;

a communications unit connected to the bus system; a memory connected to the bus system, wherein the memory includes a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to receive a request for a first application from a second application in which the request includes a universal resource locator and a user identification and, wherein every request for the first application uses the universal resource locator; modify the universal resource locator based on the user identification, wherein the step of modifying maintains the universal resource locator unchanged as shown in the second application; and direct the request to a selected application within a set of applications using the modified universal resource locator.

11. (Currently Amended) A data processing system comprising:

a bus system;

a communications unit connected to the bus system;

a memory connected to the bus system, wherein the memory includes a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to associate a plurality of applications with a first universal resource locator; assign the plurality of applications with plurality of universal resource locators excluding the first universal resource locator; receive a request for a first application from a second application, wherein the request includes the first universal resource locator and an identification of a user and, wherein every request for applications within the plurality of applications uses the first universal resource locator; modify the first universal resource locator based on the user identification, wherein the step of modifying maintains the first universal resource locator unchanged as shown in the second application; and redirect the request using the modified universal resource locator to a particular application within the plurality of applications.

12. (Currently Amended) A data processing system for managing access to a set of applications associated with a universal resource locator, the data processing system comprising:

receiving means for receiving a request for a first application from a second application, wherein the request includes the universal resource locator and a user identification and, wherein every request for applications within the set of applications uses the universal resource locator;

modifying means for modifying the universal resource locator based on the user identification, wherein the step of modifying maintains the universal resource locator unchanged as shown in the second application; and

directing means for directing the request to a selected application within the set of applications using the modified universal resource locator.

13. (Original) The data processing system of claim 12, wherein the user identification is an Internet Protocol address of a node originating the request.

14. (Original) The data processing system of claim 12, wherein the user identification is a user name located within the request.

15. (Original) The data processing system of claim 12 further comprising: replacing means for replacing the selected application with a new selected application.

16. (Original) The data processing system of claim 15, wherein the new selected application is a new version of the selected application.

17. (Previously Presented) The data processing system of claim 12, wherein each application within the set of applications is assigned to a different universal resource locator and wherein the directing means comprises:

first identifying means for identifying the set of applications using the universal resource locator;

second identifying means for identifying the selected application based on the user identification;

and

sending means for sending the request to the selected application using an assigned universal resource locator assigned to the selected applications.

18. (Currently Amended) A data processing system for managing access to a plurality of applications, the data processing system comprising:

associating means for associating the plurality of applications with a first universal resource locator;

assigning means for assigning the plurality of applications with plurality of universal resource locators excluding the first universal resource locator;

receiving means for receiving a request for a first application from a second application, wherein the request includes the first universal resource locator and an identification of a user and, wherein every request for applications within the set of applications uses the universal resource locator;

modifying means for modifying the first universal resource locator based on the user identification, wherein the step of modifying maintains the first universal resource locator unchanged as shown in the second application; and

redirecting means for redirecting the request using the modified universal resource locator to a particular application within the plurality of applications.

19. (Original) The data processing system of claim 18, wherein the identification is an Internet Protocol address.

20. (Original) The data processing system of claim 18, wherein the identification is a user name.

21. (Currently Amended) A computer program product in a computer readable medium for managing access to a set of applications associated with a universal resource locator, the computer program product comprising:

first instructions for receiving a request for a first application from a second application, wherein the request includes the universal resource locator and a user identification and, wherein every request for applications within the set of applications uses the universal resource locator;

second instructions for modifying the universal resource locator based on the user identification, wherein the step of modifying maintains the universal resource locator unchanged as shown in the second application; and

third instructions for directing the request to a selected application within the set of applications using the modified universal resource locator and the user identification.

22. (Original) The computer program product of claim 21, wherein the user identification is an Internet Protocol address of a node originating the request.

23. (Original) The computer program product of claim 21, wherein the user identification is a user name located within the request.

24. (Original) The computer program product of claim 21 further comprising:  
third instructions for replacing the selected application with a new selected application.

25. (Original) The computer program product of claim 24, wherein the new selected application is a new version of the selected application.

26. (Previously Presented) The computer program product of claim 21, wherein each application within the set of applications is assigned to a different universal resource locator and wherein the second instructions comprises:

first sub-instructions for identifying the set of applications using the universal resource locator;

second sub-instructions for identifying the selected application based on the user identification;

and

third sub-instructions for sending the request to the selected application using an assigned universal resource locator assigned to the selected applications.

27. (Currently Amended) A computer program product in a computer readable medium for managing access to a plurality of applications, the computer program product comprising:

first instructions for associating the plurality of applications with a first universal resource locator;

second instructions for assigning the plurality of applications with plurality of universal resource locators excluding the first universal resource locator;

third instructions for receiving a request for a first application from a second application, wherein the request includes the first universal resource locator and an identification of a user and, wherein every request for applications within the set of applications uses the universal resource locator;

fourth instructions for modifying means for modifying the first universal resource locator based on the user identification, wherein the step of modifying maintains the first universal resource locator unchanged as shown in the second application; and

fifth instructions for redirecting the request using the modified universal resource locator to a particular application within the plurality of applications.

28. (Original) The computer program product of claim 27, wherein the identification is an Internet Protocol address.

29. (Original) The computer program product of claim 27, wherein the identification is a user name.

30. (New) The method of claim 1, wherein directing the request to the selected application within the set of applications using the modified universal resource locator comprises:

writing the modified universal resource locator in a source code of the selected application to form a modified source code;

compiling the modified source code of the selected application to form a modified selected application; and

directing the request to the modified selected application in place of the selected application.
